Welcome to our 8-Week Ionized Water Wellness Study

This 60-day cohort is a structured hydration protocol using Kangen ionized water.

This is not medical treatment and no medical claims are being made.

This is a guided wellness experiment focused on consistency, subjective observation, and measurable change.

Participants agree to:

- Drink 6–10 glasses of Kangen ionized water daily
- Eliminate soda, sports drinks, and juices
- Prepare all coffee and tea using Kangen water
- Complete online symptom surveys on Day 1, Day 30, and Day 60
- Have weight, blood pressure, and pulse recorded on Day 1, Day 30, and Day 60

Diet & Exercise Consistency

Participants agree to maintain their normal diet and exercise routines during the 60 days to preserve the integrity of the data.

If improved hydration increases energy and naturally leads to more movement or exercise, that is welcomed. However, extreme or intentional changes in diet or exercise programs during the 60 days are discouraged so that results can be observed clearly.

This cohort requires consistency, honesty, and follow-through.

Thank you so much for participating!
